

Interface to AGRIS™ V9 Inventory

Extended Option for Managing Bulk Products Weighed on Scales

Electronically manage shipping and receiving of bulk products for improved accuracy.

Process sales orders and create delivery tickets or stock additions right at the scale.

Appropriate for both weighed and non-weighed inventory items.

Improve Efficiency

- Reduce data entry time by capturing weights directly from the scales and generating an outbound delivery ticket or inbound stock addition.
- Minimize the need for manually rekeying tickets.
- Eliminate the extra step of manually creating stock additions when processing inbound transactions.
- Create invoices and operation reports sooner by updating inventory balances automatically at the time delivery tickets and stock additions are processed.

Improve Data Integrity

- Minimize costly errors through the automatic transfer of data, including the ability to import delivery tickets into AGRIS V9.
- Inhibit fraudulent scale activity with weights acquired directly from digital weight indicator.

Improve Cash Flow

- Expedite the AR process in AGRIS V9 with the ability to create invoices automatically from the delivery tickets.
- Reduce risk of lost revenue due to misplaced tickets.
